Q: Buying Domains with PR

I want to buy domains that already have a decent PR. Where do I start?

A: First, you can only buy domains that are available for purchase.

If you're looking for domains that are about to be released to the public for purchase, search for domains that have a Registrar status of: "PendingDelete". These domains are in their last status until they're deleted and available for (re)purchase.

Try godaddy.com for more info on purchasing domains (this includes backordering domains).

Q: Lists of Domains

Where can I get a list of domains?

A: Search Google. Here's a list to get you started.

Q: PageRank stopped working or goes slow

I successfully got the PR for some domains and then it stopped working.

A: Verify your internet connection is still good. You can quickly do this by choosing OPTIONS / CHECK FOR UPDATE from the top pull-down menu.

If you get a response, then you're connected.

If it's not a connectivity problem, Google may have banned your IP address. These bans are typically temporary. Please try again later or from a different location. Please abide by Google's Terms of Service when using this tool. The following 3 settings will help you with this:

Seconds to Wait Between Groups - How long should the tool wait after polling a group of domains.

How many domains per group - How many domains to group together before sleeping.

Run ban protection every 100 polls - This option will query for the PageRank of "google.com" after every group of 100 domains. If it's no longer able to get the PageRank for "google.com", it will stop polling entirely and give you a message.

Q: 250,000 Limit Per Poll

I tried loading a file with more than 250,000 domains and it gave me a message. What is going on?

A: Right. To streamline the application, we only load a maximum of 250,000 domains into RAM. If you want to query more than 250,000 domains, simply break it up into multiple files.

Q: Feature Request

I'd like to see some new features in an upcoming release. What do I do.

A: Just let us know. Email us at tools@googlepagerankings.net

Q: Found Bug

Hey, I found a bug. Now what?

A: Let us know. Email tools@googlepagerankings.net

Q: Pricing and Availability

How much does the registered version cost?

A: \$99.00 and can be purchased here. This license allows you to run it on 3 unique computers that you own.

Q: All about license registration

How does the license registration process work?

A: Once you purchase a fully registered version, you we will need to process the request and generate a Serial Number. You will usually have your Serial Number via E-mail within 24 hours of purchasing. If you don't receive it, please email us at: support@googlepagerankings.net

Q: How many computers can I install it on?

How many computers can I install it on?

A: The demo can be installed on as many computers as you like.

Three for the fully registered version. And it's the first 3 computers that you enter your serial number on.

Q: Lost Serial Number

I lost my serial number. What do I do?

A: Email us at: support@googlepagerankings.net
